

Class Calendar Release Notes

<http://www.classcalendar.biz/support/>
support@classcalendar.biz

Version: **v4.8 r0**
Date: **24 April 2006**

Important Note ...

HTML Templates

Relevant only to schools with customised main HTML templates:

Because of changes to the Class Calendar graphics regime - in particular, customised button graphics and document background colours - minor changes have been made to the main HTML template.

Any school templates that have been uploaded have already been modified to take account of these changes. If your school uses a customised template, then you - or your graphics person - should download the new version of the template. Go to School details > Graphics and right-click on your template file.

New Functionality ...

Customers / Delete Customer

It is now possible to delete customer records.

To delete a customer, go to the Customers view and search for the relevant customer record. Click on delete. A confirmation dialogue protects against accidental deletion.

If the customer being deleted has made a reservation, the reservation and order records are preserved. However, the customer associated with these records is marked as the 'unknown customer'.

If the school administrator is acting for the customer when the customer is deleted, then an "end acting for customer" procedure is automatically performed. If the customer is logged on when their customer record is deleted, then the customer is logged off.

Customers / Search for Customer by Name

It is now possible to search for customers by user name.

In the Customers view, the Names search now looks for matches in the customers' given name, family name and user name. The search is not case sensitive, but names must be correctly spelt in order to be found. Results are always listed alphabetically, by family name and given name.

Vouchers / List

It is now possible to list issued vouchers by course type and status - current, redeemed and expired.

In the Vouchers view, you can now list issued vouchers by course type and voucher status - current (redeemable), redeemed and expired. Vouchers are listed in the order in which they were issued.

Note that if you delete a course, then any vouchers issued for that course will become invalid and not redeemable. So if you intend to delete a course, it's a good idea to first check whether there are any current vouchers for that course type.

Graphics / Navigation Buttons

It is now possible to customise all navigation buttons to match the school graphics.

The School details / graphics view now allows the school administrator to download the standard set of button image files, modify these, and upload a new set. Full details of this are being prepared for the Class Calendar support pages.

Graphics / Background Colour

It is now possible to set the background colour for all windows.

Prior to this version, it was possible to set a background image for the main browser window. However, where a single flat colour is required, it's more efficient to set the background to this colour, rather than use an image file - so both options are now provided.

Subsidiary windows - for customer notes update and terms and conditions in the checkout form - take the background colour, not the background image.

General Ledger Code

It is now possible to specify a general ledger code for use with Civica ICON.

For schools using Civica as their payment service provider require a "general ledger code" for the transaction. This can be set by the Class Calendar system administrator.

Note that the school must use a single general ledger code for all activities. This is because the Civica Paylink interface accepts a single general ledger code for the transaction, rather than accepting separate codes for each ordered item or class.

Bug Fixes ...

Past Orders

A bug prevented the school administrator from viewing some types of past order records. This has now been fixed.

Checkout and Reservations

Prior to this release, two or more checkout items of the same type - such as reservations, cancellations and vouchers - could appear in random order. Items now appear in the order in which they were selected by the user.

School Details / Graphics

A bug existed that caused inconsistencies if two or more files with the same name were uploaded using the School details > Graphics form. This has now been fixed.

School Resolve Booking / Date Selection

Prior to this version, the calendar display used for rebooking a cancelled class defaulted to the current year and month. The calendar now defaults to the year and month of the cancelled booking.

Customer Change Booking / Date Selection

Prior to this version, the calendar display used for rebooking a cancelled class defaulted to the current year and month. The calendar now defaults to the first year and month with an available class.

Order / Checkout Notes

A bug existed that caused the checkout notes instructions to be copied into the checkout note for an order, in some circumstances. This has now been fixed. The database has been updated to remove any checkout notes instructions that were erroneously copied into order records.
