Version: **v5.0 r0**
Date: **16 January 2007**

New Functionality ...

Email Attachments

It is now possible to specify an email attachment for the school, or for specific courses.

You can now specify an attachment to be sent to the customer with the automated receipt email. (The receipt email is also CC'd to the school, see 'School Email Addresses' below.)

Email attachments can be of any file type - image files, PDFs, text files and RTF files being the most obvious. You can also specify Microsoft Office files, but be warned - these files can transmit viruses and other malware. It is your responsibility to ensure that you are not sending malicious code to your customers. If in doubt, save Microsoft Word files as 'Rich Text Format', and use the RTF file.

You can specify a default attachment for all receipts, or just for specific courses:

- To specify an attachment for all receipts, go to School Details > Contact, and upload your attachment file.
- To specify an attachment for a specific course, go to Courses, select Update for the appropriate course, and upload the attachment file.

If you specify both, then the rule is as follows: course attachments *override* the school default attachment. Thus, if an order is placed for one course - and that course has an associated attachment - then only the course attachment is sent, and not the school default attachment.

Receipts for multiple courses may carry multiple email attachments, but no file is attached more than once on each receipt.

School Email Addresses

It is now possible to specify an email address for automated messages.

The School details > Contact section now allows the school administrator to specify two email addresses: one is seen by customers, the other is used only by the Class Calendar server. The server uses this second address to deliver copies of receipts sent to customers, and to deliver invoices.

By default, the same email address is used for both purposes.

Public Course List

It is now possible to link to a specific course within the course list.

You can now create hard-coded links to a specific course within the school's list of courses. To link to the course list page, use for example:

<http://uk.classcalendar.biz/waterclass/>

To link to a specific place in the list, use:

<http://uk.classcalendar.biz/waterclass/#CRS-0000000062>

Where 'CRS-0000000062' is the unique ID for the course you want. (You can find the unique ID by going to school perspective > course view.)

Note that you can also link directly to the calendar for the course, with:

<http://uk.classcalendar.biz/waterclass/public?cmd=cls-res-req&crsId=CRS-0000000062>

In an upcoming release, we will be providing 'course groups' so that lists of specific courses can be presented as an alternative to the complete list.

PSP Monitoring

Class Calendar is now able to selectively monitor PSP transactions.

Monitoring of payment service provider (PSP) interactions can be important if you suspect that there are problems with your PSP account.

Class Calendar is now has improved monitoring facilities for PSP transactions. For obvious security reasons, this monitoring is normally off. We can switch it on for test transactions - just call us if you have any problems with your PSP.

Bug Fixes ...

Price Code Names

In previous versions, the names of price codes were sometimes incorrectly rejected as duplicate names. This has been fixed.

Staff Account Names

School administrators can create and update school sales staff accounts. In previous versions, different staff accounts could have the same given name and family name. This caused problems in identifying the 'handler' of orders. Staff accounts with the same name are therefore no longer permitted.
